## Release PostgreSQL Provider 5.1.2 in detail

### FDO Provider (Map Rendering)

- A bug in the FDO Provider was fixed that caused all text entries to be truncated after the first letter when updating objects on the map. The issue was due to an incorrect conversion of character encodings, which led to strings not being saved correctly. After the correction, all text entries are now stored and displayed completely. The function for moving geometries on the map now works as expected.
